

I am a final year student at Izmir Dokuz Eylul University, Department of Mathematics (English) and Eskisehir Anadolu University, Web Design and Coding. I started coding with Python in August 2020. Then I created static websites using HTML, CSS and JavaScript. I worked on server basics with Node.js and Express. I created a website for a company using Vue.js and Firebase technologies and published it in a Serverless architecture on the AWS platform. I'm working on learning React.js.

I'm creating Unit and E2E tests for websites using Jest and Puppeteer.

In October 2021, as part of my graduation project, I started making a Flutter application in Dart language. I continue to develop the front-end program of this application, which publishes the exam, course schedules and exam results of the students of the Dokuz Eylul University Mathematics Department.
